

RETRACTABLE AWNINGS

A retractable awning is the ideal shading solution for decks and patios. They can be conveniently mounted on the wall, soffit or roof for additional headroom. With a simple hand crank or an optional motor, your awning will instantly protect you from the elements. Completely self-storing, it eliminates the need for seasonal removal and storage.

Fabrics:

Choose from PARA Tempotest fabric collection. Acrylic fabric is more attractive and breathes better than other fabrics. Acrylic fabric is also resistant to fading and mildew, and has a water repellant Teflon coating. Other fabrics are also available.

RETRACTABLE AWNINGS

Motors:

By motorizing your awning you can extend and retract your awning effortlessly. With a flick of a switch or remote, the awning will extend or retract automatically. A standard wall switch or remote control is available with the optional plug-in motors, eliminating the need for an electrician.

Options:

Crossover Arms

Sometimes the area on the wall to mount the awning is very narrow, yet a larger projection is desired. This offers the ability to overlap the arms in order to fit larger projection arms onto a narrow frame. This cross-arm version is available when the desired projection exceeds the width.

Valance Plus:

Is an optional roll down drop valance. This valance is great for extra shade on western exposures when the sun is low on the horizon. Acrylic or mesh fabrics are available for the Valance Plus, as well as manual or motorized control.
